CPU Scheduling – fcfs.c

Input

user07@localhost:~/CPU Scheduling — /usr/bin/vim fcfs.c

```c
#include<stdio.h>
int main(){
        int n,i,j;
        printf("Enter the number of process");
        scanf("%d",&n);
        int at[n],bt[n],tat[n],wt[n],ct[n];
        for(i=0;i<n;i++){
                printf("Enter the arrival and burst time");
                scanf("%d %d",&at[i],&bt[i]);
        }
        float total_tat=0,total_wt=0;
        ct[0]=at[0]+bt[0];
        for(i=0;i<n;i++){
                if(ct[i]<at[i]){
                        ct[i]=at[i]+bt[i];
                }
                else{
                        ct[i]=ct[i-1]+bt[i];
                }
        }
        for(i=0;i<n;i++){
                tat[i]=ct[i]-at[i];
                wt[i]=tat[i]-bt[i];
                total_tat=total_tat+tat[i];
                total_wt=total_wt+wt[i];
        }
        printf("\n Average turnaround time :%.2f",total_tat/n);
        printf("\n Average waiting time :%.2f",total_wt/n);
        return 0;
}
-- INSERT --                                                    1,17          All
```
